

Pallet Block Making Machine is Used to Produce Wood Blocks for Wood Pallets

Specifications :

Detail Introduction :

Advantages of Pallet Block Making Machine

Pallet block making machine is used to produce wood blocks for wood pallets, and is also called compress wood block making machine. Pallet block making machine mainly includes three types of specifications: single head, double-head, and three-head pallet block machine.

Advantages of Pallet Block Making Machine

- 1 Simple machine, and easy operation. One person could handle 3 machines.
- 2 Cross-section is completely vertical, reducing the previous cutting loss.
- 3 Setting the cutting length by entering the value, fully automatic, and suitable for the specifications of pallet block.
- 4 Saving the production cost and enhancing the process of automation.
- 5 Pallet block machine could recycle the wood waste efficiently.
- 6 Free fumigation. Because the pallet block is made by hot pressing, it is free fumigation.

Wood crushers are commonly used shredding equipment for processing sawdust of different fineness. The wood crusher can quickly smash logs, branches, bamboos, straws, and other biomass materials into sawdust, and the production efficiency is very high. This industrial machine shredder is a new type of superfine wood processing equipment. Wood crusher machine also can be called wood shredder, wood grinder, bamboo mill(milling machine), branches pulverizer. The processing size of the raw materials for the high-efficient wood crusher ranges from 5cm to 50cm, and the final sawdust size can be decided according to the customer's requirements.

No.	Item	Specification
1	Cutter Diameter	600mm
2	Blade Quantity	4pcs
3	Length of Blade	150mm
4	Crushing Diameter	250* 250mm
5	Speed of mainshaft	2500r/min

6	Cutter Diameter	600mm
7	Blade Quantity	4pcs
8	Length of Blade	150mm
9	Power	15~45 kW
10	Cutter head diameter	610~1000 mm
11	Capacity	0.5~5 t/h
